

Minutes of Meeting: Updated Use Cases, Swimlane Logic Standards, and C4 Panelist Alignment

Date: September 23, 2026

Time: 1:30 PM – 2:40 PM

Location: Online

Presiding: Mr. Carl Dominique Bueno

Attendees: Rei Khalil S. Galido, Joshmar Clavero, Joshua Concepcion, Roman Rico Albania

1. Use Case Diagram & Presentation Standards

- **Presentation Strategy:** When presenting the use cases, explicitly state that a new, updated form of the use case has been implemented.
- **Numerical Indexing:** Add formal numbering to every use case for structured indexing (e.g., UC 1.1).
- **Traceability Placement:** Remove the requirement traceability section from the use case document.

2. Swimlane Activity Diagram Standards

- **Decision Node Syntax:** Formulate every decision node as a question, ensuring the inclusion of auxiliary verbs such as "has" or "is".
- **Single Endpoint Constraint:** Ensure strictly that every individual use case swimlane terminates at only one end point.
- **Specific Workflow Revisions:**
 - Update UC 1.3.1 (*Decide on a submitted article*).
 - Update UC 1.5 (*Sign off editor-authored copy*).

3. Architecture & Panel Feedback Alignment

- **Panelist Corrections:** Ensure that during presentation and documentation reviews, it is explicitly communicated that panelist comments regarding C4 diagrams have been applied.

Action Items & Deliverables

Task	Assigned To
Apply numerical IDs (e.g., UC 1.1) to all use cases and remove requirement traceability from the use case document	Team

Task	Assigned To
Standardize swimlane decision nodes to questions ("has"/"is") and enforce single-endpoint termination	Team
Update swimlanes specifically for UC 1.3.1 and UC 1.5	Team
Verify and highlight applied panelist comments within the C4 architecture diagrams	Team
