

NOVUS v2 - Final Bundle Management

Fully Dressed Use Cases

Business Requirements (BR)

ID	Requirement
BR-01	The system must provide a dedicated dashboard for the Publisher to oversee final bundle operations.
BR-02	The system must allow the Publisher to monitor the real-time editorial status of pending issues.
BR-03	The system must allow the Publisher to establish and modify deadlines for upcoming issues.
BR-04	The system must allow the Publisher to officially publish the finalized bundle to the live website.

Use Case Full Descriptions

Use Case Name	View Dashboard
Use Case ID	UC-01
Author	Rei Khalil S. Galido
Purpose	To provide the Publisher with a high-level overview of the final bundle management system.
Requirement Traceability	BR-01
Priority	Medium
Preconditions	The user is logged into the system with Publisher privileges.
Postconditions	The system displays the Publisher dashboard with current bundle metrics.
Actors	Publisher
Flow of Actions	Basic Flow: 1. The Publisher accesses the Final Bundle

	Management portal. 2. The system authenticates the user's role. 3. The system loads the dashboard layout, populating it with current issue data. Alternative Flow: Authentication Failure: 1. The system detects insufficient privileges. 2. The user is redirected to the login screen with an "Access Denied" message.
--	--

Use Case Name	View Editorial Status
Use Case ID	UC-02
Author	Rei Khalil S. Galido
Purpose	To allow the Publisher to track the progress of the editorial pipeline before finalizing a bundle.
Requirement Traceability	BR-02
Priority	High
Preconditions	The Publisher is logged into the dashboard.
Postconditions	The Publisher successfully views the completion status of articles and graphics.
Actors	Publisher
Flow of Actions	Basic Flow: 1. The Publisher navigates to the "Editorial Status" module. 2. The system retrieves real-time progress data from the editorial pipeline. 3. The Publisher reviews the list of pending, validated, and completed submissions.

Use Case Name	Set Issue deadlines
Use Case ID	UC-03
Author	Rei Khalil S. Galido
Purpose	To enable the Publisher to configure target dates for bundle completion and publication.
Requirement Traceability	BR-03
Priority	High
Preconditions	The Publisher is authenticated and viewing the issue configuration settings.
Postconditions	The new deadline is saved in the database and visible to the editorial team.
Actors	Publisher
Flow of Actions	Basic Flow: 1. The Publisher selects an upcoming issue.

	2. The Publisher inputs a new date and time for the issue deadline. 3. The Publisher clicks "Save Deadline". 4. The system updates the database and broadcasts the deadline to the editorial dashboard. Alternative Flow: Invalid Date: 1. The Publisher enters a date in the past. 2. The system rejects the input and prompts: "Deadline must be a future date."
--	--

Use Case Name	Publish Final Bundle to Website
Use Case ID	UC-04
Author	Rei Khalil S. Galido
Purpose	To push the approved and finalized editorial bundle to the public-facing Novus website.
Requirement Traceability	BR-04
Priority	Critical
Preconditions	The bundle has been submitted by the Editor and is marked as complete. User is Publisher.
Postconditions	The bundle content is live on the public website and accessible to readers.
Actors	Publisher
Flow of Actions	Basic Flow: 1. The Publisher selects a completed bundle ready for publication. 2. The Publisher clicks the "Publish Final Bundle" action. 3. The system prompts for a final confirmation. 4. The Publisher confirms the action. 5. The system pushes the content to the live production database and updates the public website homepage.

Test Case Table

TC ID	UC ID	Test Case Name	Test Case Description
