

Minutes of Meeting: Faculty Consultation, High-Level ERD Architecture, and Finals Deliverables Scope

Date: September 4, 2026

Time: 9:30 AM – 10:30 AM

Location: Online

Presiding: Team / Sir Joe Gene

Attendees: Rei Khalil S. Galido, Joshmar Clavero, Joshua Concepcion, Rico Albania(Secretary)

1. Faculty Consultation & Database Architecture

- **Framework Table Behavior:** It was noted during consultation that web/software frameworks automatically generate their own underlying system tables upon initialization.
- **Entity Relationship Diagram (ERD) Scope:** The team began planning the project's ERD. It was explicitly clarified that only the **high-level ERD** should be presented during the Finals defense.

2. Modeling Standards & Diagram Mapping

- **Activity Diagram Specifications:** The faculty provided guidance that Activity Diagrams serve as the direct visual mapping of scenarios outlined within the fully dressed use cases.

3. Finals Requirements & Scope Alignment

- **Final Deliverables List:** The essential deliverables required for the Finals submission were formally confirmed as follows:
 - Activity Diagrams
 - Entity Relationship Diagram (High-Level ERD)
 - Use Case Diagrams and Fully Dressed Use Cases
 - Panel Comment Matrix

- **Action Items & Deliverables**

Task	Assigned To
Draft of the Entity Relationship Diagram (ERD)	Team
Create Activity Diagrams mapping out scenarios directly from fully dressed use cases	Team

Task	Assigned To
Finalize updates to Use Case Diagrams and Fully Dressed Use Case documents	Team
Update and consolidate the Panel Comment Matrix with action items	Team

Meeting Link: <https://asiapacificcollege.sharepoint.com/:v:/s/SYADD1IT243T1AY2026-2027/IQAvsNzO0-mNTYgiHhCA9lgZaf4qvvAF4Gpd6DOQe2-LRmE?e=6odUah>

The screenshot shows a Microsoft Teams meeting window titled "Meeting in 'G08 PBLecture'". The main content is a web browser displaying the dbdiagram.io interface. The browser's address bar shows the URL: `dbdiagram.io/d/identity-and-access-6a986535450bea1bed6cb2a`. The dbdiagram.io interface has a dark theme and displays a database schema for "Identity and access".

On the left, a code editor shows SQL code for two tables:

```

1 // =====
2 // ===== IDENTITY & ACCESS MANAGEMENT =====
3 // =====
4 // =====
5 // =====
6 // =====
7
8 Table account {
9   account_id uuid [pk]
10  username varchar(100) [unique]
11  email varchar(320) [unique, not null]
12  password_hash text [not null]
13  account_status varchar(30) [not null, default]
14  email_verified_at timestampz
15  force_password_reset boolean [not null, default]
16  last_login_at timestampz
17  failed_login_attempts integer [not null, default]
18  locked_until timestampz
19  created_at timestampz [not null]
20  updated_at timestampz [not null]
21  deleted_at timestampz
22
23  indexes {
24    email
25    account_status
26  }
27
28 Table person {
29   person_id uuid [pk]
30

```

The central area of the interface shows a visual diagram of the database schema, with tables represented as boxes and their relationships indicated by lines. The right sidebar, titled "Diagram Views", shows a search bar and a list of tables grouped by schema (public):

- account
- person
- person_email
- person_phone
- address
- role
- permission
- rule_permission
- account_role
- user_session

At the bottom left, a small notification box says: "Embed Dashboards in 15 Minutes. Fast, flexible, and pixel-perfect embedded analytics is just a snippet away."

On the right side of the Teams window, a vertical list of participant avatars is visible, including Rei Khalil Galido, Joshua Concepcion, Joshmar Clavero, Jose Ezequiel L. Queraida, and another participant.
