Minutes of Meeting: MSYADD1 Paper Review, Prototype Alignment, SRS Structure, and Deployment Architecture

Date: November 3, 2026

Time: 12:00 PM – 1:00 PM

Location: Room 403 C

Presiding: Mr. Felino Calderon III

Attendees: Rei Khalil Galido, Joshmar Clavero, Joshua Concepcion, Roman Rico Albania

1. Research Paper & Requirements Evaluation

- **MSYADD1 Paper Review:** The team and adviser reviewed the current draft of the MSYADD1 research paper to assess progress and align on required adjustments.
- **Software Requirements Specification (SRS) Guidelines:** The adviser clarified the core structure of the SRS document:
    - Focus heavily on system features and functional requirements (defining specific features and system functions).
    - Systematically list all functional requirements per module prior to detailing non-functional requirements.
    - Treat non-functional requirements as metrics defining scale, performance, and capacity (e.g., "how much" and "how many").

2. Prototype Synchronization & System Architecture

- **Basic & Alternate Flow Mapping:** Prototype development must continue with strict fidelity to the documentation, explicitly reflecting every step from the basic flow and alternate flows within the interactive screens.
- **Deployment Diagram & Traffic Modeling:** When designing the deployment diagram and system architecture, the team must explicitly analyze and account for projected user traffic.

Action Items & Deliverables

Task	Assigned To
Provide the adviser with the active access link to the updated research paper	Team
Conduct a full review of previous SYSADD materials to ensure alignment	Team

Task	Assigned To
Structure the SRS section by detailing functional requirements per module before non-functional metrics	Team
Align the prototype interface and interactive flows directly with documented basic and alternate flows	Team
Draft the deployment diagram incorporating user traffic specifications	Team
